

console vault

unique security solutions

Model # 1054

2011-2014 Lincoln Navigator Installation Instructions

- 1) Before you start the install set your own unique combination on your lock, see the "Instructions For Setting Your Personal Combination" sheet.
- 2) Remove all your contents from the center console. Take the Vault base and tip it forward on a 45 degree angle then slip into the center console as shown in figure 1. After the Vault base clears the back edge of the console and the front area where your ports are located the Vault base should sit down in place as shown in figure 2.
- 3) Now take the lid assembly and slip the back edge of the lid assembly underneath the top back portion of the factory console but on top of the Vault base as shown in figure 3. The four threaded posts/studs will line up with the holes/slots on the Vault base. Once the lid assembly is in the proper position take the four acorn nuts provided with your vault and thread them onto each of the threaded studs. Tighten these acorn nuts down using a 5/16" wrench, see figure 4. Do not over tighten, just snug them up.
- 4) Next, position the vault fully forward in the factory console. Now using the self tapping screw provided, tap the screw down through the hole in the bottom of vault base, see figure 5.
- 5) Next put the bottom liner in the bottom of the unit and the installation is complete.
